ALPHAGEN

Online, Real Time Monitoring system that allows you to monitor and control your Burlodge equipment from your office PC

BNETWISE

Another Burlodge innovation to help you guarantee your customers top quality, safe meals

BNetwise is the newest innovative development in BURLODGE HACCP software. **BNetwise** allows you to control and monitor your meal service system from your central PC. You can turn individual carts "on" or "off", start a meal cycle, review HACCP error codes, view the time remaining in a cycle, read temperatures inside the cart while it is operating and reprogram one or more carts at a time, all from your main computer. Every event, with times and temperatures is monitored and recorded and stored in a database that can be accessed, sorted and printed from your PC. Food temperatures can be recorded electronically to replace paper audits. The overall result is better monitoring of your equipment and your procedures, to easily identify potential problems.

In 1996 Burlodge launched the first meal delivery cart with built in HACCP controls. In 1998, the HACCP Information Technology System (HIT) with the ability to store and download operating events was added.

BNetwise is the next generation of systems !

The screenshot shows the BNetwise software interface. On the left is a grid of cart icons numbered 4773 to 4792. A bracket on the left labels this as 'Cart Icon'. A 'Tool Bar' is at the top left. The main window displays a detailed view of cart 4773, labeled 'Surgery 1'. This view includes 'On/Off Buttons' (a red power button and a blue 'I' button), 'Equipment Location' (a location icon), and 'Cart Serial No.' (4773). It also features several temperature and time displays: 'Oven Temperature Display' (40), 'Cold Temperature Display' (110), 'Time Display' (4), and 'Food Probe Temperature Display' (0, 1, 2, 3). At the bottom right of this view are 'Cycle Buttons' (0, 1, 2, 3). An 'Alarm Box' at the bottom right shows a table of alarms:

Date	Alarms
05/09/2001	SC1
05/09/2001	H1
05/09/2001	L3

LEGEND

- refrigeration mode
- retherm cycle
- alarm
- network conflicts
- idle

System Requirements

- Pentium III Processor
- 128 MB of RAM
- 8 GB of hard drive
- CD ROM and floppy drive
- Network card and data fax modem
- Windows 2000
- Office 2000 (Microsoft Access)
